## Citations and explanations (Rule 70.7)

All documents cited in the search report are referred to in this communication.

In the light of the disclosure and the (combined) teachings of these documents, the present application is considered to meet the requirements, novelty and inventive step, since:

- a process for the preparation of biphosphonic acid compounds which comprises the reaction of a carboxylic acid with phosphorous acid and a phosphorous chloride wherein sulfolane is used as the solvent, is not known from prior art literature and
- there could not be derived any suggestion from the (combined) teachings of prior art that by the use of a water miscible and neutral solvent (sulfolane) instead of prior art solvents which are not water miscible (organic) solvents and/or not neutral solvents superior yields of biphosphonic acid compounds can be obtained and the reaction mixture can be conveniently worked up by quenching into water.

Industrial applicability is given.
